Sony Center Potsdamer Platz – Berlin

Object:

The Sony Center at the Potsdamer Platz Berlin is one of the most famous architectural building projects worldwide. The building was planned for 5 years by the popular Chicago architects Murphy-Jahn, the unique building-complex combines urban life for living, work and entertainment perfectly. They realised the signs of time well and replaced common but outdated central warm water systems by innovative new decentralized instantaneous water heaters. Moreover they separated the warm water network from the general room heating system. Energy efficient electronic CLAGE heaters provide now 134 apartments of the »Esplanade Residence« in a far more cost saving way on daily basis and the utility costs for energy consumption is significantly reduced as well.

Plumbers:

Specht Kalleja + Partner Gebäudetechnik GmbH,
a company of BAU · WERK · PLAN,
Keplerstraße 8 – 10, 10589 Berlin, Germany

Completion of the renovation: 2011

Units installed:

70 CFX-U electronic compact instantaneous water heaters with remote control FX at the kitchen sink

192 DSX electronic comfort instantaneous water heaters with remote control FX in the bathrooms
